Review of NIS 13A Section 62

The manuscript of Section 62, NIS 13A was reviewed as requested. The paper was well done and no major questions have been raised. The following comments cover only small points and all have been discussed with [REDACTED] They are forwarded only for the record. 25X1A9a

- Page 62-2 Line 9 doesn't seem to fit with the rest of the sentence.
- Page 62-4 Is there the danger of double counting in the table? The amount of coal converted to electricity is no longer available as an energy source.
- Page 62-6 There are other indigenous natural resources that are abundant, such as salt, potassium, etc. Suggest inserting energy before the word natural.
- Page 62-30 The administrative unit Sachsen Anhalt no longer exists. Staassfurt is in Bezirk Magdeburg.  
In the reference "the Braunschweig-Magdeburg Field in the Halle district" the word coal should be inserted before district to avoid the area referred to being mistaken for Bezirk Halle.
- Page 62-30 A number has been omitted here.
- Page 62-52 Although 2.7 million tons is referred to as insignificant, it equals the 1957 production.
- Page 62-56 Foreign trade figures are given as 25% and 3.4 million tons. The percentage equivalent of the 3.4 million tons should probably be given also to provide some basis of comparison.
- Page 62-92 The references to Brandenburg and Thuringia should be changed as discussed.
- Page 62-107 Schwedt is closer to Stettin than Frankfurt. It would probably be better to refer to it as on the Oder, northeast of Berlin.
- Page 62-112 If the pipeline is to supply Schwedt, a pipeline crossing the Oder at Frankfurt would require a 75 kilometer spur reaching north toward Schwedt. This, however, seems logical as it would be easier to tie in with the rest of the chemical industry.
